(57)

A computerized method for controlling lighting in an area. The method includes determining a lighting profile of lighting in the area, then controlling lighting in the area based on the lighting profile. For example, determining a respective lighting profile for each of a plurality of lighting fixtures within the area to be controlled, and using the lighting profile to turn on the lighting fixtures at a respective point for a light level.

About The Company & Assets

Touche Lighting specialized in lighting control technology and electronic lighting components used within the lighting industry. The company developed proprietary technology and built relationships with customers in the lighting market. Due to bankruptcy proceedings, the company's assets are now being offered for sale through a sealed bid process.

The sale includes the following assets:

- Two (2) patents related to lighting technology
- Manufacturing dies used in production (original cost approximately \$250,000)
- Customer list of past clients and industry contacts
- Four years of company tax returns
- Product technology and development

These assets provide the foundation for restarting production, expanding an existing lighting business, or developing new products.
